Commentary

Over the month of June, stock markets generally rose moderately. For example, the FTSE 100 rose from 7,218 on 30 May to 7,425 on 28 June.

However, the start and end of month numbers hide some of the intra month volatility. For example, on 3 June the FTSE 100 fell as far as 7,079 during the day, after Donald Trump threatened to impose trade tariffs on Mexico. This added to existing investor concerns about ongoing trade issues, principally between the US and China.

We used this market weakness to top up equities, buying a FTSE 100 ETF at a market level of around 7,100. We were then able to sell this just over a week later at a gain of around 4.4%, as markets rallied after the US and Mexico reached an agreement.

Investors are currently more optimistic about the prospect of a trade deal between the US and China after Trump and Xi held a positive meeting at the G20 summit. However, trade is just one of the issues hurting the global economy, with growth slowing in most of the major economies so far this year.

As a result, investors believe that the central banks may look to reduce interest rates or loosen monetary policy – possibly with new rounds of quantitative easing - to accommodate more growth.

This has led to bond prices rising and yields (correspondingly) falling with the benchmark 10-year US Treasury yield falling from 2.51% at the beginning of May, to 2% at the end of June. Given how well fixed interest has done recently and the low yields currently available, we prefer the more defensive short dated fixed interest at present.

The economic and political outlook is highly uncertain around the globe, but particularly in the UK with the process to choose a new Conservative leader and, consequently, Prime Minister, currently underway. This makes it very difficult to see what might happen with Brexit, but the chance of a no-deal outcome does appear to have increased. For now, that means businesses continue to hold back investment, and investors remain very wary of putting their money into the UK.

As a result of this uncertainty we have decided to reduce our UK commercial property exposure, selling both the Aviva and Standard Life funds over the month. We were also keen to increase the liquidity of our portfolio in light of the well-publicised issues surrounding the Woodford Equity Income fund.

We remain cautiously optimistic about stock markets as a whole but believe it pays to be selected. We think that parts of the UK, Japan and Asian markets remain attractive but some other parts of the world are quite expensive. We have also dialed down the risk of the non-equity parts of the portfolio to offset the current uncertainty surrounding the global economy and stock markets.

Since launch on 1 November 2017 the fund has returned 4.7%. To put this into context, the average fund which holds between 20% and 60% in equities (the FE UT Mixed Investment 20%-60% Shares sector) rose by 3.4% over the same period.
