Commentary

Markets have recently recovered somewhat since the beginning of 2019.

The FTSE 100 reached a low of 6,694 on 3 January. By 20 February it had recovered to over 7,200, before dropping back a bit to close the month at 7,074.

Investors have been concerned about several issues, in particular the potential for slowing economic growth in both the US and China, the world's two biggest economies. This has been exacerbated by the so-called "trade war" between the two nations.

However, signs of positive progress in trade talks, along with the Federal Reserve appearing to "pause" on future interest rate rises, have helped markets to rally. China has also acted to stimulate its economy.

In the UK, the chance of a hard Brexit appears to have receded in the past week meaning the pound has rallied sharply.

This has had a negative impact on the FTSE where much of the revenues are derived from outside the UK. It has also hurt the value of our overseas holdings in the short term.

We have always tried to use volatility to our advantage and managed to do so to good effect during the first part of this year. When markets hit their lows on 3 January we were able to strike a new defined returns product when the FTSE was at 6,694 and the S&P 500 was at 2,447. If both markets are simply at or above those levels on 3 January next year then the product will provide a 16.05% return.

As markets recovered, we were also able to reduce risk by banking a gain on one of our "volatility trades". Having purchased a FTSE 100 tracker when markets hit 6,740 in December, we sold this in January at just shy of the 7,000 level.

We also had another defined returns product kick out in February providing a 12.85% return over 12 months despite markets being virtually flat over the period.

We have partially reinvested this into a new product with Morgan Stanley on 15 February. If both the FTSE 100 and S&P 500 are the same or higher than their starting levels on 15 February 2020, the product will give us a 13.13% return.

We are cautiously positive about stock markets which are much less expensive than they were a year or so ago. However, we remain underweight in direct equity and instead gained exposure via the defined returns.

UK assets remain unloved given the uncertainty over Brexit. Should this uncertainty be removed then we think UK domestic stocks could do well. Other assets like UK property are struggling at present but prospects could improve should a no-deal Brexit be taken off the table.

Over the past 12 months the fund returned 0.73%. To put this into context, the average fund which holds between 20% and 60% in equities (the FE UT Mixed Investment 20%-60% Shares sector) fell by 0.1% over the same period.
