Commentary

Stock markets have continued their recovery from the lows of late December and early January.

The FTSE 100 reached a low of 6,694 on 3 January. By 21 March it had recovered to over 7,350, before dropping back a bit to close the month at 7,279.

Investors have been concerned about several issues. In particular, they have worried about slowing economic growth in both the US and China, the world's two biggest economies. The US yield curve has recently inverted meaning that short term interest rates are higher than the market's expectations for long term rates. In the past this has often been a signal for a slowdown or recession.

A slowdown in the US was inevitable after the strong growth of the past few years, and because the short-term stimulus from president Trump's tax cuts has now largely began to fade. However, we don't expect a global recession partly because the Federal Reserve has put any future rate increases on hold, but also because data coming from China is now more positive.

China began to add stimulus to their economy late last year after it began to slow. This now seems to be working with business surveys back into positive territory. There are still concerns about the so-called "trade war" between China and the US but for now there is something of a ceasefire.

In the UK, worries about Brexit continue to weigh on the economy with investment intentions remaining largely on hold. However, any deal which eventually brings some certainty could see certain UK asset classes recover.

We have always tried to use volatility to our advantage and managed to do so to good effect during the first part of this year. When markets hit their lows on 3 January we were able to strike a new defined returns product when the FTSE was at 6,694 and the S&P 500 was at 2,447. If both markets are simply at or above those levels on 3 January next year then the product will provide a 16.05% return.

We also had another defined returns product kick out in February providing a 12.85% return over 12 months despite markets being virtually flat over the period.

We have partially reinvested this into two new products with Morgan Stanley, one in February and one in March, both of which can potentially provide similar returns should markets be the same or higher by the next anniversary.

Over the past month we have reduced our holding in index linked gilts which have done very well recently, adding to short dated fixed interest instead. We are also making some changes to our alternative equity portfolio, adding in a second infrastructure fund.

Over the past 12 months the fund returned 3.46%. To put this into context, the average fund which holds between 20% and 60% in equities (the FE UT Mixed Investment 20%-60% Shares sector) rose by 2.76% over the same period.
