Commentary

Most of the major stockmarkets fell in May. The FTSE 100 Index in the UK saw returns of -2.9% over the month whilst the major US index, the S&P 500, returned -6.4% (in US dollar terms).

Markets have weakened as investors' concerns have increased after another round of tariffs were announced in the tit-for-tat negotiations between the US and China.

The month saw both countries increase tariffs on imports with the US pushing ahead with import taxes on \$200 billion of goods from China and China reciprocated with tariffs on \$60 billion of US imports.

Continuing the theme, the US President announced towards the end of the month that he would also impose a 5% tariff on goods from Mexico, with a threat to raise this to 25% in October, unless the "illegal immigration problem is remedied".

Economic growth has slowed in the major economies so far this year and investors are concerned that this will exacerbate the situation, potentially tipping some countries into a recession.

As a result, investors believe that the central banks may look to reduce interest rates or loosen monetary policy – possibly with new rounds of quantitative easing – to accommodate more growth.

This has led to bond prices rising and yield (correspondingly) falling with the benchmark 10-year US Treasury yield falling from 2.51% to 2.17% over the month of May.

In the UK, the Prime Minister, Theresa May announced that she was to stand down on 7th June. Whilst not unexpected, this has just added to the broader uncertainty with regards to Brexit. This was most clearly seen in the currency market as the value of sterling against the US dollar fell from almost \$1.32 at the start of the month to below \$1.26.

In the portfolio, we have made one change in the holdings in the last four weeks. The recent mixed performance of the Schroder Tokyo fund along with the risks as the main fund manager retires and is replaced by a new manager have led us to sell the fund and switch into the Lindsell Train Japanese Equity fund.

The Lindsell Train is a familiar name in the fund as we have held the UK Equity fund in the portfolios for many years. The Japanese Equity fund has a similar long-term, low turnover investment philosophy and focuses on a few key areas of the markets where they see high quality businesses.

If the equity markets continue to weaken further, we shall be looking to take advantage with volatility trades in the UK equity market and possibly another defined returns product.

Since launch on 1 November 2017 the fund has returned 2.7%. To put this into context, the average fund which holds between 20% and 60% in equities (the FE UT Mixed Investment 20%-60% Shares sector) rose by 1.08% over the same period.
