

IFSL Equilibrium Global Equity

Portfolio A Acc | September 2020

The Fund aims to provide capital growth, that is, to increase the value of your investment, over a minimum of 5 years. However, there is no certainty that this will be achieved. The fund will have exposure to at least 80% in shares of companies (equities), in any geographic sector. The Fund will invest at least 70% in other funds and investment trusts (collectively 'Investment Funds').

Commentary

After the dip in markets in late July, most major equity markets picked up in August.

New outbreaks of the virus were contained with local lockdown measures although the imposition of quarantine requirements on travellers from a number of countries has meant the travel and tourism industry is struggling to return to previous levels of income.

The rise in markets means that the global index, the FTSE World Index, is now above where it started the year with a return of 3.6% since the end of 2019. This has been driven largely by the rally in the US stock market and, in particular, by the sharp rise in US technology stocks, as reflected by the technology-laden NASDAQ 100 Index which has returned over 38% so far this year.

In contrast, the recovery in the UK stock market remains relatively weak and despite returning a 2.4% gain in August, is 18.5% below the level it started 2020. Clearly, investors are reluctant to buy UK stocks until there is some clarity on the outcome of the Brexit transition which is due to finish at the end of the year.

This autumn will be an important time to gauge how companies can manage as many government support programmes finish. We will be closely watching the company results and important barometers like consumer confidence and employment trends.

We have retained our slight overweight position to equities, including the holdings of alternatives and defined returns. We believe that equity markets will continue to provide some of the best returns as economies continue to recover and the prospect of a vaccine could herald a more confident background for investors to commit capital.

Equities in the UK and Asia still have plenty of scope for good returns and valuations remain attractive.

In fixed-interest stocks, government bonds offer security but little value at current levels whilst we prefer corporate bonds given the higher yields and improved prospects for recovery.
