

IFSL Equilibrium Adventurous

Portfolio A Acc | October 2020

The Fund aims to deliver returns greater than inflation over a minimum of 5 years, through a combination of capital growth, that is profit on investments, and income paid out of investments, such as interest and dividends, after any charges have been taken out of the Fund. However, there is no certainty this will be achieved. Over the longer term, any 10 year period, the Fund aims to deliver an average of inflation plus 5.5% per annum. Inflation is measured as the UK Consumer Prices Index for these purposes. The Fund will invest at least 80% in other funds and investment trusts (collectively 'Investment Funds').

Commentary

After a strong rally from the lows of March, stock markets have had something of a “wobble” recently. A rise in cases of the Coronavirus in Europe, including here in the UK, is causing some concern. Economies have been recovering quickly over the past few months but there is a danger this may stall as further restrictions are imposed.

Across the Atlantic, US stocks had their own bout of volatility. Here, the big technology stocks which have been driving the market have had a minor sell-off. This may be simply because their valuations had become so stretched, or it may be because of the amount of speculative trading in derivatives on these stocks is amplifying volatility.

The dip also coincided with the Federal Reserve announcing a change to their monetary policy regime which in effect means they will tolerate shorter term bouts of inflation. This may be significant for the path of future interest rates.

We feel there’s a difficult balancing act in portfolios right now. There are certainly risks that we could see a sharp pull back in stocks and so we have to be careful about being over-exposed. We are nervous of the upcoming US presidential election where there is potential for some disruption, especially if the result is tight. Here in the UK we still don’t have a trade deal with the EU, whilst the transition period ends at the end of the year.

At present the second wave of the virus is less deadly than the first. This could be because the greater testing is picking up the less serious cases we have missed in the past, or it could be because cases are largely in younger people and things may worsen if it spreads to older generations. Again, it is difficult to know which way things will go. Of course, should we see a vaccine or if any of these risks recede, this may push markets sharply upwards.

Within equities, we prefer Asia over developed markets and within the UK prefer smaller companies over the FTSE 100. We continued to hold more fixed interest than usual, although after a strong run we think returns here will tail off.

Over the past 12 months the fund has returned 0.56%. By comparison, the average fund which has between 20% and 60% in shares (the Financial Express UT Mixed Investment 20% - 60% shares sector) has returned -1.23%.
