

IFSL Equilibrium Cautious

Portfolio A Acc | January 2021

The Fund aims to deliver returns greater than inflation over a minimum of 5 years, through a combination of capital growth, that is profit on investments, and income paid out of investments, such as interest and dividends, after any charges have been taken out of the Fund. However, there is no certainty this will be achieved. Over the longer term, any 10 year period, the Fund aims to deliver an average of inflation plus 4% per annum. Inflation is measured as the UK Consumer Prices Index for these purposes. The Fund will invest at least 80% in other funds and investment trusts (collectively 'Investment Funds').

	Baillie Gifford EM Leading Companies	0.9%	

Commentary

We are all glad to see 2020 come to an end. Given the challenges we faced and the major market sell off in the first half of last year it is perhaps surprising that the fund provided a positive return!

The fund returned 3.6% over the calendar year (31 December 2019 to 31 December 2020). The official benchmark for the fund is UK inflation (consumer prices index) which at the latest reading was 0.3% and so we have also seen a positive "real return" over this period. Whilst the fund is not in any Investment Association (IA) sector it can be useful to compare returns to other "mixed investment" funds which have similar levels of equity exposure. For example, the IA Mixed Investment 20-60% Share sector returned 3.52% over the same period. For further context, the FTSE 100 index FELL by 11.55% in 2020.

Recent performance has been helped by our positions in UK equities, including defined returns which are linked to the UK stock market. The Brexit trade deal along with the vaccine news has helped UK stocks to have a very good period since early November, despite the ongoing economic challenges. Returns have also been partly driven by our infrastructure investments which continue to do well, and by our addition of a "recovery" fund after the initial news about the vaccine.

As we move into 2021 we are feeling slightly more cautious, with many stock markets looking quite expensive based on the earnings of the underlying companies. Whilst we expect those earnings to recover this year much of this is already factored into markets. We therefore would not be surprised to see some short term market volatility.

In terms of other assets, we still see some value in fixed interest, in particular corporate bonds, but like equities they have had a good run and this is unlikely to be repeated. Property still remains a very challenged asset class but we remain on the lookout for bargains.
