

IFSL Equilibrium Cautious

Portfolio A Acc | September 2021

The Fund aims to deliver returns greater than inflation over a minimum of 5 years, through a combination of capital growth, that is profit on investments, and income paid out of investments, such as interest and dividends, after any charges have been taken out of the Fund. However, there is no certainty this will be achieved. Over the longer term, any 10 year period, the Fund aims to deliver an average of inflation plus 4% per annum. Inflation is measured as the UK Consumer Prices Index for these purposes. The Fund will invest at least 80% in other funds and investment trusts (collectively 'Investment Funds').

Commentary

In the main, stock markets have ground slowly higher in the last month or so, punctuated by the occasional bout of volatility. Most investors remain overweight equity compared to other asset classes like bonds. In many ways, many equities look expensive relative to history, but they still look cheap compared to bonds. Sometimes this is referred to as the TINA trade – because There Is No Alternative to equities if you want growth!

Warren Buffett said we should “...be fearful when others are greedy and greedy when others are fearful”. However, despite high allocations to equities investor surveys still show a distinct lack of greed. Whilst we think a short-term correction is possible, we rarely get a more serious drop in markets unless investors are exhibiting more exuberance. We therefore think the “buy the dip” mentality may continue and help to constrain any market setbacks. However, we have seen more serious moves in emerging markets. Much of this is driven by the Chinese crackdown on technology firms that they believe have too much influence on their society. This does leave such firms looking much cheaper than their Western counterparts, but the uncertainty will impact their stocks for some time.

Investors are still worried about high levels of inflation. Most of this is being driven by temporary factors, but supply chain issues are lingering and if anything are getting worse. The news is full of stories of empty shelves and lorry driver shortages, whilst the price of shipping containers has sky-rocketed. Normally, central banks respond to inflation with higher interest rates. However, this would have limited effect on inflation driven mainly by supply issues rather than excess demand. Therefore, central banks continue to signal no rate rises until perhaps the end of 2022. Bond markets have rallied as a result.

We continue to allocate some of the portfolio to “real assets” like infrastructure and property which tend to grow their revenues ahead of inflation. Within our fixed interest portfolio we are favouring corporate bonds with low sensitivity to interest rates, rather than government bonds which tend to be more exposed to changes in rate expectations. Within equities, we still believe the UK market has some good value, particularly in the smaller end of the market.
